~~~~~ New Buffalo, Michigan.

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

GEORGE STROMER

### Our Gurantee

We guarantee every plant sold by us to be first class in every respect, free from any injurious diseases or insect, and true to name, and hold ourselves ready, upon proper proof, to refund or replace any that prove otherwise. It is mutually agreed between ourselves and the customers that we shall not be liable for a greater sum than the amount paid us for the plants. Not responsible for crop damaged by weather, fire or floods. We reserve the right to return money in case of shortage.

We are located in the Great Fruit Belt in Berrien County, Michigan, 11½ miles from Lake Michigan, and 3 miles from the Indiana state line. M. C. R. R. & P. M. R. R. service.

### REFERENCES

Citizens Bank, Michigan City, Ind.; American Railway Express Agent, Postmaster, or Dunn & Bradstreet.

### REMITTANCE

Our terms are cash with order. Or we will book early orders, if one-third of amount is sent with orders, and balance payable April 1st or before plants are shipped. Remit by Draft, Post Office Money Order, Express Money Order, Registered Letter, or your personal check. Stamps may be sent for small orders. For the very best service, send money orders.

### HOW TO ORDER

Use the order sheet or ordinary paper. Write plainly the amount of each variety wanted, name of each variety and price. (Write name and address plainly).

# Garden Success

I take great pleasure in sending you this little catalog called "GARDEN SUCCESS." Again you are being offered the highest quality NORTHERN GROWN nursery stock at the lowest possible prices. In 1936 we all experienced one of the worst droughts that has ever been known, and of course it has cut the supply of nursery stock of all kinds in half. There are about one-third enough strawberry plants in all the nurseries in the country to supply the demand that there will be for them. This naturally will cause the prices of plants to be a little higher than last year, but when you consider that all other farm products are up, and strawberries and all other fruits sold for a much higher price than the year before, you will find that every item that we list is a real value. The South Michigan Nursery is the HEADQUARTERS for Genuine Mastodon and the New WAYZATA everbearing strawberry plants.

We have plenty of tractors, trucks, and other machinery, modern in every way, to grow and handle our vast nursery stocks in the most economical manner. Our office and packing house are modern and up to date.

Your order will be handled in a most business-like way. It will be acknowledged with a first-class letter, enclosing a bill of goods, so that you will know if we have it booked properly. Please look over our acknowledgment carefully and advise at once if there are any errors.

In the busy spring season, when days are valuable, we try to ship your order with the least possible delay. Many times we are able to send order out the same day received. All orders are shipped according to the shipping date you have on your order sheet. Do not overlook giving us this date. IF YOU ARE IN A HURRY, telephone your order. Call NEW BUFFALO 27-F2, or wire it Western Union or Postal Telegraph, and we will ship to you promptly C.O.D.

We wish to thank each and every one of our good friends and customers who have favored us with their orders in the past, and we hope you will all remember us again this spring when you make out your order for plants and trees.

**Golden Oblong Pumpkin**

We are not in the seed business, nor do we intend to go into it, but we are going to offer you seed of this wonderful Pie Pumpkin. It happened that one Pumpkin plant came up voluntarily in a potato patch. At first it looked like a squash vine, but it turned out to be a Pumpkin. The fruits are long and round, like picture. Bright golden yellow, and smooth. They resemble an overgrown ripe cucumber. The seed chamber is very small, with few seeds. The flesh is exceptionally fine grained. This one volunteer plant bore 36 ripe Pumpkins and 6 green ones that failed to get ripe. Everyone that has tried these wonderful Pumpkins says they are the best they have ever

tried. We do not know its name, but we call it GOLDEN OBLONG. Fruits never get over 14 inches long. One Pumpkin will make two large pies. 15c per pkt.; 3 for 40c.

Golden Oblong Pumpkin

**New "Penn State" Tomato**

All-America Selection for 1936

Originated by Pennsylvania State College and Agricultural Experiment Station; a very desirable medium size tomato of uniform scarlet color. The flesh is dark red, of super quality, with very little core and few seeds. Extra early. It matures 115 days after seed is started in greenhouse. Will yield 20 tons to the acre. A very valuable variety. Price: Pkt., 10c; 3 pkts., 25c; 1/2 oz., \$1.00; 1 oz., \$1.85, postpaid.

**A BARREL OF STRAWBERRIES  
and a Barrel of Fun**

Grow any everbearing strawberry in a barrel. 50 plants can be planted in a common sugar barrel, or even an old potato barrel. Bore 2-inch holes in the side of the barrel, and fill barrel with some good soil. Then set the plants in these holes, and 10 plants can be set on top. Keep well watered. Be sure to bore a few small holes in the bottom for drainage. Barrel can be kept in the back yard, or even on the back porch. This saves space, and you can have berries for breakfast twice a week. No weeds, no cultivation necessary. Keep runners pinched off. Wayzata would be the ideal variety to grow by this method. They make very few runners, but great quantities of berries. Be the first one in your neighborhood to try this stunt.

18 MONTHS**

**DROUGHT  
RESISTING**

A few years ago, before automobiles were all good, I often said I wished I could have a car with all the good points of all the makes in one car—then I would have a real automobile. WAYZATA is like that REAL automobile. It has all the good features of all strawberry varieties. First of all it is the sweetest of all Strawberries. It is red clear to the heart, never ripens with a green tip. One of the most noticeable features of Wayzata is its very small hull, and this makes it easy to prepare for table use. The berry is well shaped, firm and ships well. Wayzata challenges the world in size and productiveness. Will bear three crops in eighteen months. The plants will start to bear fruit in 60 to 90 days after setting. Wayzata adapts itself to the widest range of soils of any variety. It does excellently in a heavy clay soil, has given fine results in muck bottom lands, and, of course, never fails on sandy and sandy loam soils. Will even give satisfactory results in the lightest of yellow sand, with a little fertilizer added to the soil before setting. It is hardy and tough. Has stood 40 degrees below zero without injury. It seems that diseases and insects just do not like the Wayzata plants. Their dark green, leather-like leaves are very rarely attacked by any of the common strawberry diseases or enemies. In drought resisting, Wayzata does as well as Senator Dunlap. Wayzata makes very few runner plants, but makes stools of suckers that will also bear fruit. It is too busy making fruit buds and new stools. I have counted over 20 fruit stems on a single plant, and still more were coming out. The plant will be just loaded with ripe berries, green berries, blossoms and buds. This is continuous from July to winter. The very reason that Wayzata plants are listed higher than other varieties of Strawberries is that even with our scientific method of growing Wayzata for plants only, we have difficulty growing enough plants to supply the demand.

## Stramer offers Something New in Strawberry Plants

Notice the picture of the two strawberry plants. This is something new. This year we are listing Wayzata Strawberry clumps. The smaller plant to the left is a one-year-old runner plant, and the large one is a Wayzata clump. This clump is over ten times as large as the one-year-old plant. In April, 1936, this plant was only as large as the one-year plant; in six months it grew to the size that it is. The rule between them is an 18-inch rule, and this will give you some idea as to the size. This clump plant could be divided into 6 or 8 plants, and every one of them would do just as well as the one-year old plant at the left, but by carefully planting this clump in your garden just as it is, by the middle of the summer you could have a single Wayzata plant as large as a bushel basket, and loaded with great quantities of rich red berries. Twenty-five clumps should furnish enough berries for an average family. This very clump plant, before it was dug up to make this photograph, was fourteen inches in diameter. These Wayzata plants were grown on rich, new ground—note the particle of rotted wood fibers still attached to the roots. These CLUMP plants are mother plants that failed to send out runner plants and instead sent out stool plants all around the mother plant. These clump plants will give marvelous results with ordinary good care when set in your garden. They are much easier to start than the runner plants, because you have more to start with. They should be planted like you would a tree. The roots are long and plenty of them. Spread the roots out all over the shallow hole. DO NOT SET TOO DEEP and tramp the soil firmly around the plant. Keep all the buds and blossoms off the plants for the first five or six weeks. This will give the plants a good start, and then let them blossom all they want. You will have berries within three weeks after they start to bloom. We have only a limited amount of these clump plants this year to offer, so get your order in early and be sure to be in on this new way of growing more Strawberries from a single plant. Our price is reasonable on these clumps when you consider that you get several plants in one when you get Wayzata clumps. DO NOT SET CLUMPS ANY DEEPER THAN EVEN WITH THE CROWN. It is always better to set any Strawberry plant too shallow than too deep. If set too deep the crown will rot out, and, of course, the plant will not do anything. The South Michigan Nursery is the originator of WAYZATA CLUMPS. We are the only firm offering these clumps (with the exception of one other nurseryman).

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

Premier

## BLAKEMORE

(EARLY)

The United States Department of Agriculture Recommends It.

This wonderful new creation called the BLAKEMORE (U. S. D. A. No. 659), was originated from a cross of the Missionary and the Premier in the year 1923 by the United States Department of Agriculture. The berries are much firmer than the Premier, Missionary or the Klondike. The BLAKEMORE are slightly blunted conic with broad shoulders and slim neck. The shape of the Blakemore might vary some in different localities. Easy picking and hulling qualities. The berries are a beautiful bright glossy red color, with tough skin, firm flesh, with wonderful mild flavor. Plants make runners freely, and you are sure of getting a good fruiting row. They should be set about 24 inches apart. If set closer than that they will get too thick. It has been tried out and found to be one week earlier than Premier. It is a wonderful market berry. Why wouldn't it be? Think of it—one week earlier than Premier.

# Stromer's

# Premier

## THE MOST POPULAR BERRY EVER INTRODUCED

If you plant STROMER'S PREMIER you will get the first berries on the market. They will be bearing heavily before other varieties begin. Your biggest picking will be when berries are in good demand and are bringing top prices. Premier will grow anywhere. The plants are sturdy and long rooted, a good drought resister. The berries are very large, and hold their size to the last picking. The flavor cannot be beaten.

In Premier we offer you the greatest early Strawberry of all time. However, the early ripening of this variety is only one of its many good features. It is immensely productive, and unlike other early ripening Strawberries, the fruit produced by Premier is of the very finest quality, color, texture and flavor; and last but not least, every berry is large in size and uniform in shape. For every purpose that a Strawberry is wanted, Premier is supreme—eating, canning, preserving, distant and local market—no other variety can give you any more pleasure, satisfaction or profit. Premier succeeds everywhere and never fails to give a big crop of the very finest berries. The foliage is tough and healthy and grows tall and rank, covering the blossoms and berries, and protecting them from frost and scalding sun.

## SENATOR DUNLAP

(MID-SEASON)

SENATOR DUNLAP IS AN OLD STANDARD VARIETY. It has made more crates and more dollars for berry growers than any other one variety. Requires very little attention. It's the toughest variety known. Plants are healthy, fast growers, and make plants freely. Should be set 24 inches by 36 inches apart in rows. Berries very dark red. Wonderful canning berry; great for preserves. Senator Dunlap is sometimes sold under the name of Dr. Burrill. We can see no difference between these two varieties, except the cost of the plants.

## CHAMPION Everbearer

Champion, without doubt, is one of the best ever-bearing Strawberries grown. It is the most prolific of all. When you plant Champion you are certain of success because 3 months after planting every plant will commence bearing, and continue all through the summer and late in the fall. The runners will commence to bear, even before they have taken root.

We grow several acres every year for fruit, and we know what we are talking about. Make sure that you get the genuine Champion. Order from us. We obtained our stock direct from the originator.

Grand Champion

## GRAND CHAMPION

(ALL SEASON)

Greatest money making Strawberry ever introduced, no crop failure on account of frosts. Has produced over 5000 quarts on one-half acre in spite of heavy spring freezes.

ALL SEASON BEARER. Commences to ripen with the Premier, the earliest berry, and produces fancy berries with the Aroma, which is a late berry. Plants are large, extra heavy, healthy foliage; berries are bright red, very large in size, and have a fancy appearance. By all means try a few in your locality. Supply is very limited. Order early to avoid disappointment.

Blueberries

# BLUEBERRIES

## DELICIOUS . PROFITABLE . VERY ORNAMENTAL

Our Blueberries are far superior to the wild Blueberry or Huckleberry. These Blueberries grow in large clusters of the most beautiful blue color, plump, tender and practically seedless. The flavor of these cultivated Blueberries is simply delicious. Bushes will grow to the height of 8 feet. The plant itself is very ornamental. During the summer the foliage is deep satiny green, and against this background hang clusters of berries royal in their magnificence. During autumn the leaves turn bronze, and during the winter months the twigs are red. Buds are pink and open to white, bell-shaped flowers. Two plants should be set out to insure cross pollination, so we would not advise you to set just one plant. We are offering 2-year plants that will start to bear the second year. Blueberries like these sell for 55c and 70c per quart on retail markets.

Blueberries prefer an acid soil containing an abundance of peat or other partially rotted vegetable matter. They also need a moderate supply of moisture and good drainage. If your soil is not already acid this condition may be created easily by mixing with the surface soil a liberal quantity of peaty material such as acid peat, partially rotted leaves, pine needles, sawdust or chip dirt from an old wood pile. A surface mulch of leaves or straw each year is also beneficial to hold an even soil moisture. Acid phosphate at the rate of 300 lbs. per acre will help make soil acid. Write United States Department of Agriculture at Washington, D. C. for bulletin on growing Cultivated Blueberries.

Always plant two or more plants.

## Rhubarb

Myatt's Linnaeus Rhubarb is an early, tender, fast growing kind, with a mild sub-acid flavor, and is not tough and stringy like most sorts. Plant some of this Rhubarb this spring, and make some early money. We are offering select No. 1 roots at a very low price.

1-year, No. 1 roots: 10c each; 40c for 6; 65c for 12; \$1.20 for 25; \$2.25 for 50; \$4.00 for 100; \$7.50 for 200; \$10.50 for 300; \$15.00 for 500; \$30.00 for 1000.

Extra heavy, 2-year clump roots: 25c each; 70c for 6; 95c for 12; \$2.00 for 25.

## Horseradish

Horseradish will grow any place. Likes a wet soil of heavy nature best. Valuable for relishes and appetizers. Grate roots early in the spring. We offer roots at very low prices. Set the roots straight up and down, and leave the top of the root about one inch below the surface.

Prices: 6 for 35c; 12 for 60c; 25 for 85c; 100 for \$2.95. All No. 1 roots. Giant Crown Plants at double the above prices.

Myatt's  
Linnaeus  
Rhubarb

## Washington Asparagus

There is no variety of Asparagus as good as Washington, and whether for home use only or for market, you cannot afford to grow any other. This wonderful new Asparagus was developed and introduced by the U. S. Dept. of Agriculture, and although a recent introduction, it has become famous the country over.

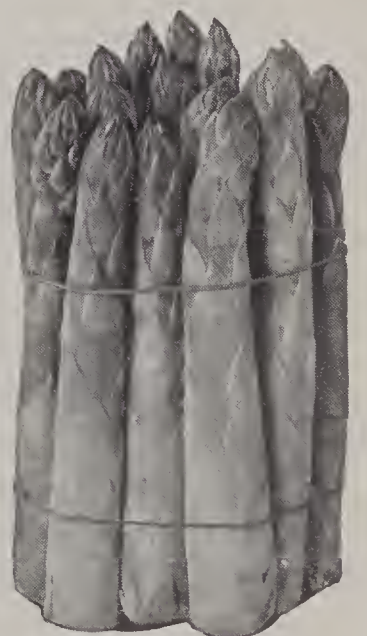

Growers everywhere are discarding all other varieties in favor of Washington, because it is earlier, the stalks are larger, more tender, more productive than any other variety, and last but not least, WASHINGTON IS IMMUNE FROM RUST, which means that one planting will produce profitable crops for many years.

1-year, No. 1 roots: 12 for 30c; 25 for 50c; 50 for 85c; 75 for \$1.10; 100 for \$1.65; 200 for \$2.35; 300 for \$2.80; 500 for \$3.50; 1000 for \$6.50.

2-year, No. 1 roots: 12 for 40c; 25 for 70c; 50 for \$1.25; 75 for \$1.80; 100 for \$2.20; 200 for \$3.40; 300 for \$4.50; 500 for \$5.50; 1000 for \$11.00.

3-year jumbo roots: 12 for 90c; 25 for \$1.25; 50 for \$2.00; 75 for \$2.90; 100 for \$3.75; 200 for \$6.00; 300 for \$7.50; 500 for \$11.00; 1000 for \$22.00.

Washington Asparagus

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

### Displays Large Berries

A quart of huge Dorsett Strawberries grown by Harry Wakeman of Bangor are exhibited by Sid Smith of Breeds-ville, State Fruit Inspector, on the Twin City market.

The berries average between  $1\frac{1}{2}$  and  $1\frac{7}{8}$  inches in diameter and are a solid red fruit said to have as rich qualities as the Dunlap. A truckload of the berries shipped from Anna, Ill., to Duluth, Minn., a distance of over 800 miles, held their color, shape and taste exceptionally well, according to Mr. Smith.

# Famous DORSETT

6640 Quarts to the Acre

This new variety was originated by the United States Department of Agriculture. It is a cross between the PREMIER and the Royal Sovereign, an English variety.

Dorsett is one of the finest berries known, and one of the heaviest producers, having produced at the rate of 6640 quarts per acre in the East. The foliage is a very dark green and holds this fine color way through the fruiting season. Dorsett berries average very large in size, even a little larger than Premier. Color is of light red, and will hold this light red color long after picking. This probably will be a big factor when you market them on the wholesale markets, as that is what the wholesale fruit buyers are looking for in the past few years. Light red berries always appear to be in better shape than do dark red ones. Be sure to try a few of the plants this year. We are sure it will be one of the leaders in a very short time.

# New! Catskill

Has Been Known to Outyield Even Dorsett and Fairfax

Berries average about as large as Fairfax. Will hold their size well to the end of the picking season. Makes a fine, vigorous plant growth. Leaves are the largest we have ever seen on any Strawberry plant. Fruit stems are thick and grow upright. Berries ripen midseason, and quality compares with Aroma and Blakemore. It was introduced by the New York Experiment Station several years ago, and we have great hopes for it. Plants are still quite scarce and our supply is limited. State certified plants of this variety are priced as follows:

|      |       |        |
|------|-------|--------|
| 25   | ..... | \$0.55 |

## Surplus Strawberry Plants

**\$4.00 per 1000**

During our digging season there are a few plants of all varieties left at the end of the day. We offer them to you who do not care to have named varieties, at \$4.00 per 1000. We will not label these plants. They are first class and fresh dug.  
No Discounts

## NEW STRAWBERRY

# Claremont

Claremont is a seedling from a cross of the Premier and the old Marshall. It was introduced by the New York Experiment Station a few years ago. It now has been out and tried in a wide area, and has proven to be a real wonder. This year especially, being very dry during the picking season, the Claremont outbore all other varieties. Even the Dorsett and Premier. One feature that was noticed is that the last berries were nearly as large as the first ones. Berries are smooth, bright glossy red (appear to be varnished), and have an attractive calyx. The plant makes a fine fruiting row, and therefore is one of the best money makers we are offering. Plant Claremont and be convinced.

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

# IMPROVED STRAIN GIANT MASTO FOR THE CITY FARMER OR SMALL GARDENER

Remembering the many hours that I have spent up in a cherry tree, or in a strawberry patch, when I was a kid, has caused me to advocate that a cherry tree and a strawberry patch belongs in every back yard or garden, where there are children. But—grown-ups are just as eager for this fresh fruit, too. By all means do not wait another year.

#### REMEMBER

We Are Headquarters for  
"True-to-Name"  
MASTODON

Genuine, Everbearing Strawberry Plants, from original strain. We grow perhaps more plants of this variety than any other nursery in this state.

Junior has just finished picking over 3 quarts of berries from the garden. He didn't even take time to comb his hair. Keeping these berries picked is one job the kids won't mind doing for you. Try it.

## 1937 SHORTCAKE GARDEN

### 250

Mastodon everbearing strawberry plants are enough for a family of five. The cost is only

### \$3.25

Here are 250 of Storer's genuine Mastodon everbearing strawberry plants set in April, 1936, in rows 63 feet long, and the rows are 2 feet apart. This requires a space about 360 square feet or 60 feet long by 6 feet wide. Not much more than a good sized living room. From small plots like these thousands of our customers all over the country are enjoying big, sweet, juicy strawberries for breakfast every morning, and some left over for jam. We claim that 250 plants are enough for an average family of five. These plants set in April or May in 1937, will commence to supply you with this delicious fruit by the first of July, and continue to November 1st or up to the time when you have a good hard killing frost in 1937. In other words, you get returns from Storer's Mastodon plants within 60 to 90 days after you set them. Then in the spring of 1938, you will have more berries than you can ever use, as they will bear much heavier in the springtime. These same plants will again bear in the summer and fall of 1938. All for only \$3.25, less discount.

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

# DON Everbearer

## 3 FULL CROPS IN 18 MONTHS, 3 BIG PROFITS

When we tell you that Mastodon does produce three full crops in 18 months; it is the largest berry grown; bears in 90 days after planting; is an excellent shipper; brings more per quart; and is a delicious home use berry—you probably won't believe it unless you have grown them yourself—and we don't blame you, but read what other folks have to say.

Mastodon does not require special soil, care or petting. Sell for 30c to 50c per quart. Mastodon sells like "hot cakes" on roadside stands. Commences to bear in 90 days after you set them. We picked 181 quarts of berries from 1½ acres on November 1st, and on November 2nd the ground was frozen solid. This frost is what stopped the Mastodon. Light frost will not injure them at all.

We often have folks ask us "How many quarts will 100 Mastodon give us a week?" We have watched our Mastodon fields this summer, and find that they will bear 3 quarts 2 times a week. If it is cool, they will not do quite so well. It takes about 8000 plants to set an acre, so that makes 480 quarts per week per acre, and sell for 25c per quart, making \$120.00 per acre per week.

### A REAL WONDER

It is the largest everbearing berry grown. Mastodon is the most prolific, the firmest, the most beautiful berry with the real Strawberry flavor. It is a berry that bears early and late, one that can be picked all spring and summer. Many of the berries grow as large as a silver dollar, and are just as perfect. Mastodon is the real marvel in Strawberries; nothing like it has ever been known. Plants that were set in May this year have produced as high as 3 quarts per plant. A field of this Mastodon in bearing is a sight never to be forgotten.

4 acres of Mastodon being picked in late fall.

### Here's How Mastodon Does it

- 1 Plant this spring—1937.
- 2 Pick first crop—July to winter—1937.
- 3 Pick second crop — June — 1938.
- 4 Pick third crop — August to winter—1938.

### 3 BIG CROPS 3 BIG PROFITS

### Plants are Not Drought Stunted

Good strawberry plants of every variety are very scarce, and especially plants that are **not drought stunted**. This year it took a good nurseryman to grow good plants, one who knew his business, and was equipped to do the job. With one of the worst droughts in history, the South Michigan Nursery came through with half a crop of **good** strawberry plants to offer to the trade. These plants are not drought stunted. They are grown on water sand bottom land that insures you those nice long fibrous roots that are healthy and will start off as soon as they are set in their new home. The price naturally is a little higher this year than last. Strawberries sold for \$2.00 to \$3.00 per 16-quart case in Chicago and Benton Harbor markets this year. We look for the price to be even higher in 1937, because the drought has affected the southern states also, and this will not drive our northern markets down. This is the year to step in and set Mastodon or Gem everbearing and Wayzata, and get real money for the fruit in the summer and fall of 1937.

Stromer's Genuine Mastodon Everbearing Strawberries are real money makers for farmers or persons having small acreage. Especially are they a real gold mine, where you live on a main traveled road, and can set up a small fruit stand. They sell like hot cakes at 25 cents per quart. Stores in good sized towns, or cities are also a fine place to market your berries, and as a rule they will pay you 20 cents per quart. They will retail them out at 25 cents. Look what Mr. Otis W. Woodard, at Quincy, Michigan, did with 2000 plants, in a dry season. Simply set the plants out in April or May in a good soil that will grow a good crop of potatoes, and cultivate every week, and keep the weeds pulled out. Hoe between the plants to keep the soil worked, so as to form a dust mulch. This will keep the plants growing, and also keep them busy sending up fruit stems. They will bear up until winter. I don't know what would stop them if it were not for a good hard frost in the fall. Manure applied in the winter and plowed under early in the spring is the best fertilizer to use. However, if you do not have this material, I advise a complete commercial fertilizer, about a 2-12-2 applied at the rate of 500 pounds per acre, broadcast before setting plants. But most important of all, don't take a chance on cheap plants offered at a so-called bargain by any fly-by-night concern. Buy from an old established concern, that has built up a good reputation by fair and square dealing, and on the merit of the stock sent out. Satisfaction guaranteed. Why pay more?

Quincy, Mich., Nov. 13, 1934.

Dear Mr. Stromer:  
I am sending herewith a report on Mastodon strawberry plants bought of you this last spring, 2000 plants, set out about first of May or latter part of April. They came through in fine shape—don't think I lost a dozen plants. They had the finest roots I ever saw on any strawberry plants. But notwithstanding the exceptionally dry season just past, they came through with banners flying; began ripening the fruit about August first. Then I began selling a few boxes about every other day, and say (not wanting to boast of myself), those large, beautiful berries were the talk of the town. Why, I didn't have to sell them, that is, I didn't have to canvass to get rid of them. I had just a few regular customers who took all I had; the only trouble was, I didn't have enough to go around. Well, the day before the hard freeze we had about November first, I picked a crate of berries for a man here who shipped them to his children living in Chicago.

In all I sold 650 quarts at 20c per quart, or \$130. Then in addition to this, we used for the table and canned and preserved 110 quarts, making in all, picked and sold, 760 quarts, from less than one-eighth acre. Considering the unusually dry season, I am very well pleased.

Very sincerely yours,  
OTIS C. WOODARD,  
44 Hawley St.

# FAIRFAX

## The Quality Berry

It is considered by most everyone who has tasted them to be by far a better flavored berry than Premier, and other good flavored berries. FAIRFAX, like DORSETT, was introduced by the United States Department of Agriculture, and is supposed to be a cross between the Premier and the Royal Sovereign. The foliage, like Dorsett, is of a very good quality. Good foliage means a good fruiting berry.

Fairfax is also a very productive berry, having produced at the rate of 5120 quarts per acre. The size of the berries averages large. They will average with the Chesapeake, and that is going some. Fairfax is a little more firm than Dorsett, and is fully as firm as Blakemore. This makes it a wonderful shipping berry. The color of the Fairfax is light red, with yellow seeds, and a nice green hull, making a beautiful combination. You should by all means try some Fairfax this spring.

# GEM Everbearer

## BEARS 60 DAYS AFTER PLANTING

**Gem**—a direct offspring of the old Progressive Everbearing Strawberry.

**Gem** was discovered four years ago by Frank Keplinger of Central Michigan. Mr. Keplinger found a single plant growing in his Progressive field. This plant was so much better that it was guarded, and planted by itself. The Gem berries are above the average in size.

**Gem** has a flavor like the Progressive or Champion. Not much sugar needed when you eat **Gem**.

**Firmness**—Firmness is what is needed in Strawberries if they are to stand shipping. Gem has this firmness. Next to Wayzata they are the most firm Strawberry we have ever grown.

**Disease Resistant**—We fail to find any disease on **Gem**.

**Productive**—We find them to be as productive as the Progressive or Champion. They are, however, much larger in size.

Have only a limited supply of plants to offer. Order early.

# STROMER'S "Certified"

## RASPBERRIES ---

ARE GROWN FOR PLANTS ONLY

*Twice State Inspected Each Year*

To grow real good Raspberry plants you cannot "burn the candle on both ends." That is, you cannot grow Raspberries for fruit, and dig plants off the sides of the rows. Plants like that will be weakened by fruiting. Our red Raspberry plants are grown two years, and then dug. They are not allowed to fruit during this time. We start them in this way. We set out a field of a certain variety, and care for them and fertilize them through the growing season. The following spring, they are cut away even to the ground, and allowed to come up again. This cutting off prevents them from bearing, and makes better, stronger plants with much better root system. These rows are dug that fall after a good hard frost, with a digging machine, and taken direct into cellars, where they are graded. The largest, and strongest, and best rooted plants are graded out, and these are what we call the one-year bearing size. They really are two years old, but we call them one-year bearing. Our transplants, two years old, are gotten by setting out nice thrifty, one-year plants in the nursery row, and grown until fall and then dug. These are set far enough apart to make heavy transplants that will bear a good many berries for you the same year you set them out in your own field. Raspberry plants that we dig and grade in the fall are not stored. They are taken outside and heeled in all winter. We do not like storage plants. All our Raspberry plants are perfectly hardy.

Chief

### CHIEF, Red Raspberry

The foliage of a plant is its workshop. Good foliage is essential to good crops, poor foliage means a poor crop. The clean, healthy foliage of "Chief" is one more reason why "Chief" is a leader.

When strawberries are about gone and common Raspberries still ten days off, in comes our new friend "Chief" and bridges the gap. These first berries of the season are mighty welcome—on the market they bring extra money.

#### OFFICIAL YIELD OF "CHIEF"

Reported by

The Minnesota State Fruit Breeding Farm

| Year | Age         | Yield               |
|------|-------------|---------------------|
| 1928 | 2-yr. Field | 180 Crates per Acre |
| 1929 | 3-yr. Field | 294 Crates per Acre |

"Chief" outyielded even Latham in these official tests. With a patch of "Chief" in the garden, you'll have plenty of delicious canned Raspberries all winter long. "Chief" is blessed with superior flavor. On the table fresh, with sugar and cream, or for canning, "Chief" sets a high standard. It is rich, bright red, high quality. "Chief" has been tested over a wide area in the past ten years and its behavior has been carefully watched. It has proven hardy, a heavy cropper, excellent quality, a good shipper, resistant to disease, and in addition it is 10 days early.

### ST. REGIS, Everbearing Raspberry

One of the most valuable of all the late introductions in the line of red Raspberries. The habit of growth is a bushy nature; will produce berries the first year in the fall, and a full crop the following spring and again in the fall.

St. Regis resembles Chief; its fruit is similar to that variety in quality, flavor and appearance. In September, long after Raspberries are out of season, St. Regis will bear a full crop of fruit, which commonly sells for seven to eight dollars for a 24-pint crate. If you have a market at hand where you can dispose of the fruit, you will find St. Regis a very profitable investment when grown on a commercial scale. If you have not the time or the ground to grow St. Regis for market, be sure to plant at least a few bushes in the garden and keep your table supplied with all you can use.

## CUMBERLAND

*The Business Black Cap*

Pages 16 and 17 for color picture

This is without question one of the most profitable and popular Black Raspberries ever grown. It is the one safe and reliable commercial variety because you can depend on a big crop regularly. We call it the "Business Blackcap" because it succeeds on all soils and produces its big crop year after year.

We have never known Cumberland to fail, and the best proof that it is a profitable variety is the fact that the demand for plants is greater every year and more Cumberlands are planted than all other varieties combined.

Cumberland is perfectly hardy and tremendously productive. The berries are extra large, glossy black, and not equaled by any other variety in quality, flavor or appearance, except Logan. Whether wanted for market or home use, we can recommend Cumberland to our most exacting customers. Disease free. Twice state inspected plants.

| 1000         | 14.60   |                    | Limit. Very scarce. |

## New LOGAN Black Raspberry

New Logan is the best and most disease-resistant and most profitable black Raspberry ever grown in this state or any other where it has been tried. Our Michigan Experiment Station claims it to be the most promising variety ever tried here. Ripens 10 days earlier than Cumberland. Berries larger, heavier yields and even though it bears heavier than Cumberland, you will harvest all the berries in a shorter time. On account of it being 10 days earlier it will be a money maker for you. Try a few at least and get started.

## LUCRETIA, The Big Hardy Dewberry

The only real good Dewberry on the market which is good for all purposes, being very productive, of extra large size, earlier than any of the rest, will grow and thrive on very light soil and live for many years. If you live in a locality where your thermometer registers seven degrees below zero, you can easily prevent the vines from winter-killing by laying down on the ground and covering them with straw, which can be held in place by just a few shovelfuls of earth. Then in the spring they can be taken up and tied to wires which are fastened just like a grape trellis, but not as high, something like three feet high is about right. Dewberries make a good addition to your blackberry list, you will like them as well or better for all uses than the common run of blackberries, and ripening early, you get the advantage of higher prices; as the berry is much larger, you can pick a crate quicker. They grow practically free from all diseases. Our plants are fine and Michigan grown. Add to your income by planting Dewberries.

| 1000         | 16.00   | 100                | 5.00   |

## New YOUNGBERRY

This new berry is so much different from any berry that is grown in most parts of the country. It is a cross between the Loganberry and Dewberry. Color of fruit is a rich wine color. Size 1 to 1½ inches. Flavor is pleasant, sweet, with the tartness of the blackberry. Excellent for table use, canning, jellies, pies, and for wine. The plant is a rank grower. Withstands cold and heat, adapted to a wide range of soils, a great producer. Try them in your locality. They will be the talk of your neighborhood. Plants are still scarce, and a little high in price.

## New Thornless YOUNGBERRY

Plant patent No. 4. Something entirely new for the Blackberry-Dewberry family! This Youngberry is absolutely thornless. One can readily see how much easier it is to cultivate and prune the bushes, also to pick the fruit. Bushes can be handled with the naked hands with perfect safety. The bushes grow just like other Youngberry bushes, and are equally thrifty, healthy and hardy. Require no winter protection this far north.

## ALFRED Blackberry

### STANDS 35° BELOW ZERO

GEORGE STROMER—Originator

Year after year, with diligent care, I have propagated these plants to such an extent that the fruit is now being supplied to the local markets at a fancy price, and is always in good demand. Last year I measured a good many berries that were over one and one-half inches long, and three inches around. Nurserymen claim that the ALFRED is the largest berry they have ever seen. Buy from the originator and get GENUINE ALFRED.

Lack of space forbids describing in detail the many good points of this variety; however, I wish to call your attention to the outstanding reasons why the ALFRED is superior to all other varieties.

**BEARS SECOND SEASON.** ALFRED is such a healthy, vigorous grower that it produces a good crop of berries the year following planting. It is not unusual to pick 10 to 40 berries from the bush the same year planted.

**IMMENSE SIZE.** The berries are twice as large as ordinary Blackberries, many of them 1½ inches long, and the finest flavored of all Blackberries. It is an ideal table berry because it is practically CORELESS, sweet and delicious. It is very small seeded.

**EXTREMELY HARDY.** ALFRED can be grown anywhere without winter protection, having withstood 30 degrees below zero, and not a single tip of a branch injured, while other varieties were frozen to the ground.

**EARLY SEASON.** This is one big feature of this variety. It ripens a week to ten days earlier than Eldorado and in productiveness it is in a class by itself. We have seen them bear a second crop. We picked many cases this year in September. As I watch the ALFRED year after year, I am more and more thoroughly convinced that the ALFRED BLACKBERRY WILL HAVE A PROMINENT PLACE IN THE VALUABLE FRUIT HALLS OF FAME.

## CRYSTAL WHITE Blackberry

Strange as it may seem, this is a real creamy white Blackberry. Mixed with the jet black ones for dessert it makes a most wonderful dish. The fruit is about the size of Alfred, with few seeds and quite sweet when fully ripe. The bushes are good, strong growers and very productive. This is not a worthless novelty, but a fruit of real value, and should be in every garden.

## POTOMAC Raspberry

The brand new variety of raspberry. Introduced by the U. S. Department of Agriculture. It is a cross between a black Raspberry and a red Raspberry, making it a purple Raspberry. Compared side by side with Cumberland, showed about twice as many berries on the Potomac as the Cumberland. Less berries were required to fill a quart of Potomac than a quart of Cumberland, so that will give you an idea as to the size of the berries. It is very free from diseases. Makes fine jellies and preserves. It is the very best of all the purple varieties. We still have a very limited supply of plants of this variety to offer.

## GOLDEN QUEEN Raspberry

A beautiful, large, golden yellow raspberry. Many prefer this variety to any of the red or black sorts, owing to its sugary sweetness and unsurpassed flavor. Should be in every garden, its beauty and high quality placing it at the head for table use. The canes are hardy, of strongest growth and very productive.

# NEWBURGH

## The New Red Raspberry

NEWBURGH was introduced by the New York Experiment Station a year or so ago, and all indications are that NEWBURGH will become the leading commercial Red Raspberry.

Because—

1. It has so far proven immune to mosaic.
2. Fruit very large, firm and holds its size.
3. Very productive. Yield 30 per cent greater than Latham.
4. Ripening season a few days earlier than Latham.
5. Extremely hardy.

They are still high in price, but try a few and get started with them.

Although this is a comparatively new variety, it is entirely past the experimental stage, and we unhesitatingly recommend Latham as one of the best Red Raspberries ever grown. This variety originated at the Minnesota State Fruit Breeding Farm and is being grown extensively in Minnesota, the Dakotas, and Canada, and has never been known to winter-kill even though exposed to 45 degrees below zero. Latham is a tall, vigorous grower, canes extra heavy, foliage dark green, entirely free from disease. Ripens with Cuthbert and enormously productive. Berries much larger than any other Red Raspberry, many of them 1 inch in diameter. Color good, quality of the best, full Raspberry flavor. Excellent for shipping or home use.

## FOUR BERRIES OF INTEREST TO EVERYONE Described on Page 15

Alfred Blackberry

Golden Queen Raspberry

## Lost Labels

Each year we have a limited amount of Raspberry plants, where the labels become lost somehow, and we do not know what variety they are, so we will offer them to you at the following prices. These will be in all grades of black, red, yellow and purple Raspberries. No sizes or varieties guaranteed.

Niagara

## CONCORD (Blue)

Concord is without doubt the most productive, the most popular and profitable variety yet introduced. It is the standard of excellence, quality and comparison on all markets, and buyers everywhere pay a premium for this superior quality Grape. Concord is perfectly hardy, having withstood a temperature of 30 degrees below zero without injury, it will produce more fruit per acre than any other variety and does well on light or heavy soil. The bunches are large and compact, berries large, bluish black color; sweet and juicy; fine quality and flavor. In fact, this variety is the one all-purpose Grape.

## NIAGARA (WHITE GRAPE)

This is the Great White Grape that succeeds everywhere and under all conditions. In fact, it is really the White Concord, as it seems to have all the good characteristics of that great variety, being equally as vigorous, hardy, and productive. Due to the tough, leathery foliage, Niagara is practically immune to fungous diseases. It is one of the most delicious and beautiful of hardy Grapes and sells at fancy prices. Berries are large; bunches large and compact; color greenish yellow when fully ripe; juicy, sweet and delicious. Whether planting for home use or market, include Niagara in your order. Prices above.

### Lost Labels

Like with raspberries, each year we have a certain amount of Grape plants, where the labels become lost, and we do not know the variety, so we will offer them to you at the prices below. Varieties or sizes will not be guaranteed, but they will be perfect, and every one will grow.

# GRAPE VINES

FOR HOME OR MARKET

Every STROMER Grape plant is guaranteed 100 per cent healthy, true-to-name and productive. They are well rooted, full of pep and will grow and produce big crops and big profits year after year, with only ordinary care. The cuttings for our Grape plants are taken from bearing vineyards, which are thoroughly sprayed and given thorough cultivation throughout the growing season. This gives us a big supply of strong, healthy wood, and as the cuttings are taken from bearing plants only, we know absolutely that every plant we send you will be true to name, healthy, and strictly first class in every respect.

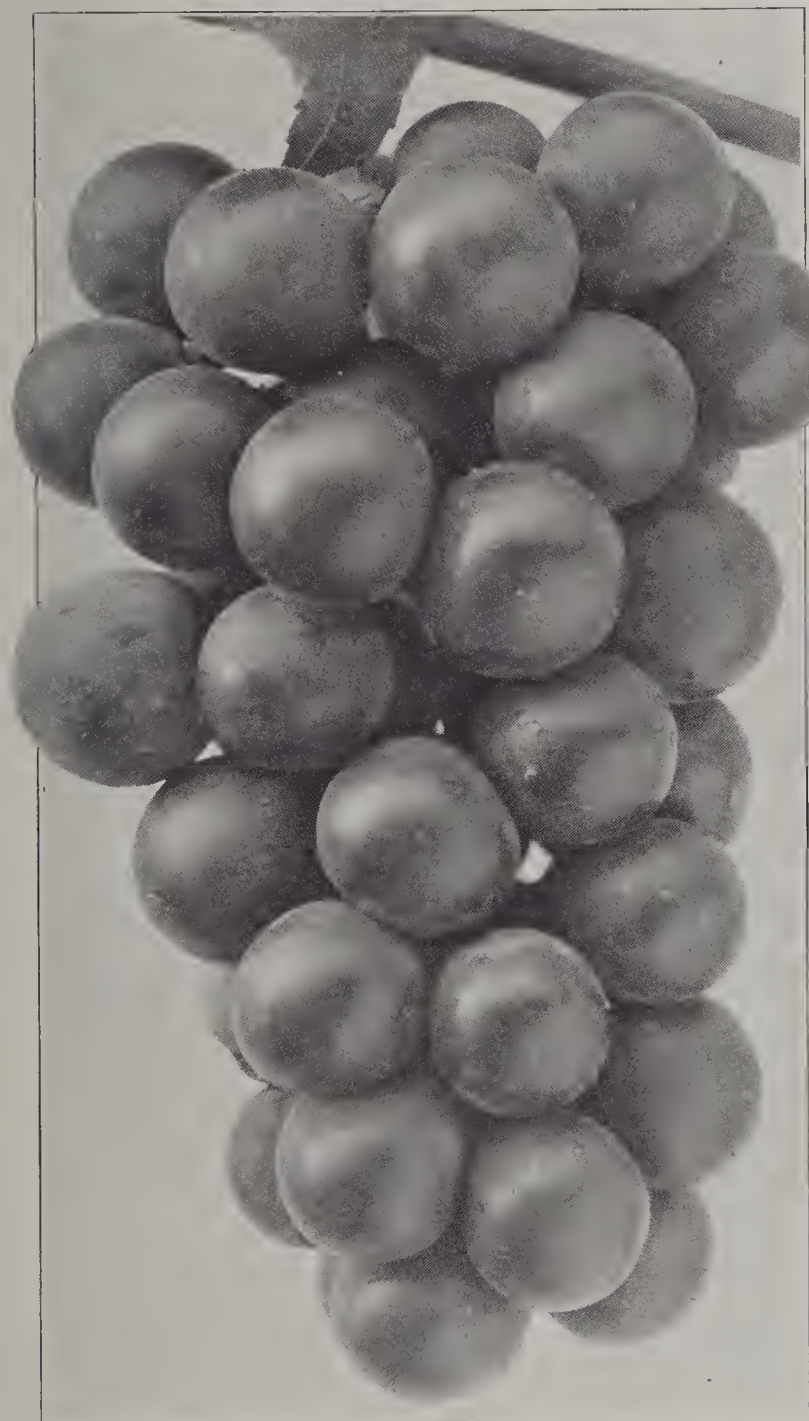

Delaware Grapes Ready to Eat—  
Sweet as Honey

## DELAWARE RED GRAPE

A rich and delicately flavored little red Grape that is generally recognized as the standard of quality to judge other Grapes by. An exceptionally desirable variety for home gardens on account of its compact habit of growth. Commands a premium in all the markets, often selling for twice the price of Concord. Very hardy. Ripens here about the middle of September.

### Perfection CURRANT

A real improvement in Currants. Big berries in long, well-filled bunches. Bushes thrifty and very productive. Brings top prices. A splendid money-maker. Fine for jellies and pie. No. 1 plants, each, 35c; 2 for 60c; 10 for \$2.70; 25 for \$6.25.

### Champion GOOSEBERRY

Very large berries of delicious flavor produced freely on the sturdy, hardy bushes. Best pie variety. No. 1 plants, each, 35c; 2 for 60c; 10 for \$2.70; 25 for \$6.25.

Gooseberries and Currants shipped only into the following States: Michigan, Indiana, Ohio, Illinois, Wisconsin, Minnesota, Iowa, and Missouri.

### Superb APRICOT

A hardy tree and a sure cropper. The best flavored, most productive hardy Russian Apricot yet produced. Medium size, light salmon color. 2-year-old, 9/16 and up, each, 70c; 3 for \$2.00; 6 for \$3.75; 10 for \$5.50.

CACO  
1/2 Actual  
Size

## CACO

### New Red Grape

Superior Quality—Heavy Bearer—  
Early Ripening

The Sensational New Red Grape

This is the new, quick growing, young bearing, early ripening, deliciously sweet, big red Grape that has created sensations in nearly all of the large Grape growing centers of the country.

As a variety for home use, leading horticulturists and Experimental Stations claim it has no equal, and we will vouch for this statement.

Caco has a peculiar characteristic not found in any other variety, in that it is so rich, melting, sugary and excellent in flavor that it can be eaten with rare enjoyment fully two weeks in advance of being fully ripe.

In appearance it is the most beautiful of all hardy Grapes, possessing a rich wine-red and amber coloring. The berries are usually large; bunch large and compact.

The vines are very strong, perfectly hardy, vigorous growers, healthy and prolific; ripening as it does early in September, the big crop is fully matured before danger of frost.

Always in demand on all markets at extra fancy prices. If you have a roadside stand, you will make money with Caco. They will be back for more.

### New PIE CHERRY *Richmorency*

This is an early ripening Montmorency type only that the fruit ripens a week or more earlier than the standard Montmorency. It ripens at approximately the same time as the Early Richmond. The parent tree is low spreading in growth, produces heavy crops, and the size of the fruit is large. The fact that this strain ripens early is a decided advantage as thousands of Montmorency Cherry trees are mixed with late-ripening factors causing Cherries in otherwise normal trees to be green at picking time. 1-year-old trees, 9/16", each, 75c; 3 for \$2.15; 10 for \$6.00; 25 for \$12.50.

# Hale-Haven

MARVELOUS

*New Peach*

Hale-Haven

This marvelous new Peach was introduced through the efforts of the Michigan State Experiment Station, South Haven, Michigan (Mr. Stanley Johnson, Supt.). It is a cross between the famous varieties South Haven and J. H. Hale. A large, beautifully colored, yellow-fleshed Peach, ripening approximately 2 weeks before Elberta. A perfect freestone, strong, thrifty grower, splendid shipper and an extremely hardy, heavy bearer of exceptionally fine flavor. The Hale-Haven has extremely high color and colors highly on the trees several days before it is ripe, thereby permitting picking while rather green, for distant shipments. Test trees produced full crops this year at the Experiment Station when crops of many other standard varieties were a failure due to low temperatures last winter. This variety will make you big money and should be included in every planting. **Priced:** 9/16", 2-yr., 3½ ft. up, each, 50c; 3 for \$1.40; 6 for \$2.50; 10 for \$4.00; 25 for \$9.00; 100 for \$35.00.

## Golden Jubilee

Of all the many new Peaches originated by the New Jersey Experiment Station, none have aroused the interest of fruit growers as this variety. It is a large yellow Freestone Peach, and is the most popular early yellow Peach. It ripens about 4 weeks before Elberta, and is a real money maker, as well as a wonderful table Peach. Tree habits are like Elberta. The skin is yellow flushed with red. Flesh yellow, juicy, tender, sweet, and FREE-STONE. Try one or two in your home orchard or garden.

Golden Jubilee

## South Haven

This variety is the hardiest of all commercial Peaches. It is not only a very good commercial Peach, but extra fine for canning and table use. Our South Haven are from selected buds and are of a high yielding strain. The fruit is large, round, very uniform in size. Flesh is yellow. Color of skin is deep yellow with red cheek. Freestone. Ripens about 18 days before Elberta, and at just the right time to bring big market prices. It is absolutely the best canning Peach. South Haven makes a good variety to plant with others to help pollinize.

Fertile Hale

## Elberta

The fruit is very large, orange-yellow color, overspread with red. Flesh is yellow with red near the pit. Freestone. Juicy, firm yet tender and fine for canning. Sweet and mild. Ripens about Sept. 10th to 20th depending of course on the season.

## J. H. Hale

Our high type of Super selected strain of J. H. Hale is the finest that can be had. Through this bud selection, we have a J. H. Hale that will produce the typical large round type of fruit that is desired instead of the long shape in so many J. H. Hale. Our J. H. Hale ripens about 3 days earlier than Elberta. Fruit extra large, golden yellow with deep carmine flesh. Freestone. Excellent quality and flavor. Trees grow large and bear young. Hardy. Does best when grown with South Haven.

## Fertile Hale

This new introduction was brought about by the Greening Nursery Co. It has been produced by bud selection and has been found to need no other variety to help pollinize it like J. H. Hale does. These Fertile Hale will produce full crops of beautiful Hales even more beautiful than the J. H. Hale. The Fertile Hale is far more hardy and productive in bud than the common J. H. Hale. At the experiment station in South Haven, Michigan, Fertile Hale came through with a crop when J. H. Hale and Elberta failed. Flesh yellow, with yellow skin with deep carmine blush. Good shipper. Freestone. Will bring the highest price on any market. Fertile Hale like South Haven are real money makers on account of their hardiness and fine quality. They are the two commercial Peaches to grow for profit and pleasure. Fertile Hale has a plant patent applied for. Our trees are the genuine.

SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

Waneta

## WANETA

This is the largest of the Hansen Plums, often 2 inches in diameter. Good red in color with a delicious flavor. We could fill a book of the size of this catalog with letters from our customers who have planted Hansen Plums and write of the wonderful results they have had. The Waneta is the most popular. We urge you to try it, and we promise you will be well pleased.

### PRICES OF PLUMS

|                                  |        |

| 10 .....                         | 6.00   |

## UNDERWOOD

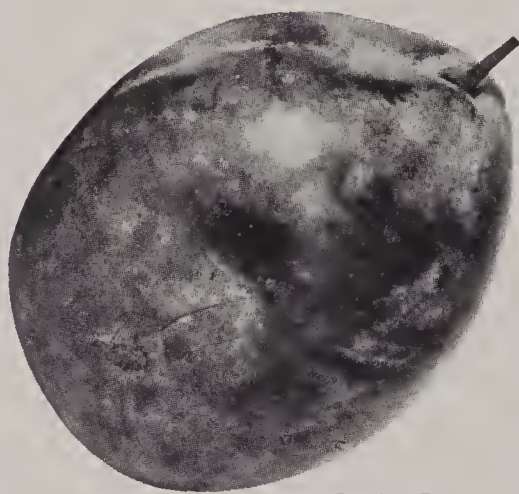

This is the earliest of the large new Plums. Ripens from about August 1st to 15th, and attains a size of 1¾ inches. The tree is one of the strongest growers of all these new Plums and gets to be very large, furnishing a large bearing surface to produce wonderful crops of beautiful fruit. Fruit is very attractive; red, firm, juicy flesh, very small pit, freestone. Splendid quality.

## YELLOW EGG

Fruit very large, prune shaped, yellow with red dots. Fine for the table or cooking. Ripens last of August.

## GERMAN PRUNE

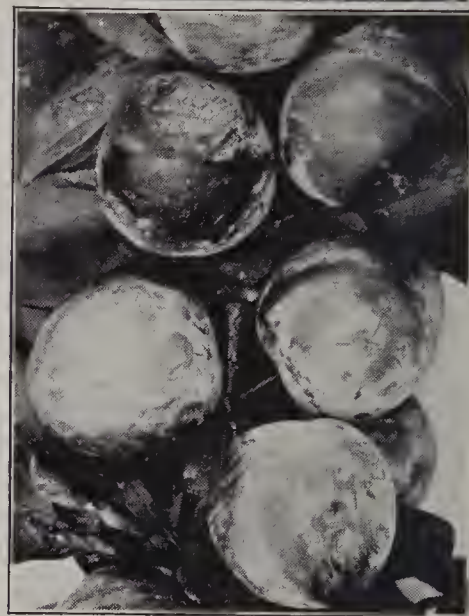

The most delicious of all Plums. Extra large size, often 2 inches in diameter. Early and abundant bearer. Combines hardiness, immense size, delicious

Stanley Prune

quality, long keeping, beautiful color, small pit. An early and prolific bearer, often producing a good crop in two years after planting.

## HARDY PLUMS

Yellow Egg

## STANLEY PRUNE

This variety is a cross between Agen and Grand Duke. Excellent for cooking or eating out of hand. The tree is healthy, vigorous, and produces full crops annually. The fruit is large in size, prune shape, dark blue with thick bloom; flesh greenish yellow, juicy, fine-grained, tender, firm, sweet, pleasant; quality good to very good; stone free; midseason. This is one of the outstanding new varieties. Prices: 1 yr., each, 75c; 3 for \$2.15; 10 for \$6.00.

# Stramer's Fruit Trees are Prolific

## HARDY PEARS

Bartlett

## BARTLETT

The most popular Pear for home use and market, a leader among canning Pears. Should be in every garden and orchard. Large, golden yellow with reddish blush on the sunny side. Flesh tender, melting and juicy, with a delicious, musky flavor. Tree vigorous, erect, bears abundantly.

## The New DOUGLAS

Claimed to be blight proof and cold resistant. Bears early, often same season planted and produces a heavy crop. A regular cropper in all soils and localities. Fruit large, smooth; beautiful golden yellow color; flecked with red and russet. Flavor delicious, very sweet, melting and juicy. Something new and better.

## SECKEL or Sugar Pear

The best pickling Pear. Fruit small, fine flavor and firm. Heavy cropper.

## DWARF PEAR TREES

Plant Dwarf Pear trees where space is limited. Bear fruit young and regularly. Duchess and Bartlett varieties only.

**\$1.00**

Each

## CLAPP'S FAVORITE

A large, pale yellow Pear with red cheek. Fruit extra fine texture, free from graininess, very sweet and highly flavored. Tree hardy and vigorous. 3-yr., \$1.00 each; 3 for \$2.50.

## ORANGE QUINCE

We list only this one Quince as we consider it by far the best. The trees commence to bear very young and produce big crops. Fruit is excellently flavored and of large size. 2-year-old trees, each, \$1.00; 3 for \$2.75.

## SWEET Cherries

### SCHMIDT'S BIGARREAU

(Sweet Cherry)

Hardy and productive. Fruit grows in clusters, and very large in size. Skin deep black, flesh dark, tender, juicy, sweet and of a very fine flavor. Stone is small; fruit ripens in July.

### BLACK TARTARIAN

(Sweet Cherry)

Fruit very large, bright purplish black, juicy, very rich and of excellent flavor. The tree grows vigorously, and is very productive. Fruit ripens last of June to early July.

### YELLOW SPANISH

(Sweet Cherry)

Fruit very large and heart shaped. Color is a pale yellow with a light red cheek when exposed on the sunny side. Flesh is firm, rather brittle and of fine flavor. Pit small. Ripens in July. Trees vigorous and hardy. The best yellow.

## SOUR Cherries

### MONT- MORENCY

(Pie Cherry)

This is one of the best of all pie Cherries. It ripens about 10 days later than Early Richmond. Fruit extra large, bright shiny red, firm flesh, juicy, and a fine home use and market variety. Trees grow strong and are perfectly hardy. They bear in 2 or 3 years, and continue to do so for many years. There are more Montmorency Cherries canned than any other variety.

Montmorency

### Pie Cherry PRICES

### EARLY RICHMOND

(Pie Cherry)

This is the earliest of all pie cherries. Fruit is medium large, bright red and juicy. Ripens early in June. Fine for canning and pies. Starts to bear very young, and is very hardy. The kids will thank you if you plant a tree or two of this variety. Nothing will be more popular with them than a tree full of Early Richmond in early June. Ripen with strawberries.

Early  
Richmond

## SOUTH MICHIGAN NURSERY, New Buffalo, Mich.

Jonathan,  
much reduced

### SNOW (Fameuse)

Well known early winter Apple. Snow-white flesh, from which it takes its name. Medium size. Deep crimson in color. Juicy and very pleasant to eat out of hand. Fills in the gap between early fall Apples and late winter Apples. Tree very hardy and productive. November to December.

### JONATHAN

The color of the fruit is bright red, the flesh is white, firm, crisp, tender and juicy. It is a very beautiful Apple, and one of the very best eating Apples. Not such a good cooker. It is one of the most desirable varieties for the holiday season. Good keeper. Trees are hardy and bear very young.

**WHILE THEY LAST**  
We have a limited supply of extra large 3-year-old Anoka, Jonathan, Delicious, and McIntosh trees that we are offering at the special price of **\$1.00 Each**  
Gain a Whole Year's Growth

Snow

### SOLID RED DELICIOUS

This variety is like Delicious in every respect excepting that it has added color. As the name implies this is a solid red, highly colored Delicious. It is recommended especially for locations where Delicious does not have sufficient color. The tree is hardy, healthy, vigorous and bears regular annual crops. Flesh is fine grained, crisp, melting and juicy. Quality is very good and the season is November to March. Delicious is a wonderful eating Apple.

### WEALTHY

Fruit is large size, round, smooth, and dark red. The flesh is white, tender, and juicy. This is the finest variety of its season. It ripens in September and will keep well into the late fall. A very good commercial variety.

### YELLOW TRANSPARENT

The very finest extra early Apple. It ripens late in July and continues in season until September. Fruit of good size, waxy yellow color. Flesh white, mild, juicy, and sweet.

Northern Spy

Red Delicious

**9/16" caliper and up, 4-5 ft. trees, none better.**

### New ANOKA

Ripens in September. The size, color and flavor of the New Anoka make it a favorite. Also a good keeper. The remarkable feature of this excellent Apple is that it comes into bearing very young, is also dwarf in stature, so that it is well adapted to backyard planting or closer in the orchard. A very good cooking Apple.

Anoka

### APPLE TREE PRICES

McIntosh

## McINTOSH

Medium in size. Fruit is beautiful red, somewhat striped. Flesh is white, crisp, and highly flavored. The tree is hardy and vigorous, and starts to bear young, and heavy. It is a favorite market and eating Apple. Ripens in September and October. Not a keeper.

## TURLEY (Turley Winesap) (Coffing Bros.)

The Turley is gradually winning its way solely on its merits. The variety originated in Indiana and is much esteemed by the growers of that state as a commercial Apple. The tree is vigorous and bears fruit early—in 5 or 6 years from date of planting. The fruit is very red and inclined to be large. Season just before Stayman's Winesap.

Turley Winesap

## New CORTLAND

The young bearing habit of this fine new fall Apple has astonished growers everywhere. It has proven to be one of the greatest eating, shipping, and market Apples ever introduced. The trees are large, healthy, and immensely productive. Fruit large and handsome. Flesh fine grained, crisp, and juicy.

## STAYMAN'S WINESAP

Succeeds everywhere. Fruit is dark red, tinged yellow, of rich, enticing flavor. A fine eating Apple and sells readily on the market.

Cortland

## NORTHERN SPY

(Farley No. 9)

A strong, vigorous tree, early bearing, heavy annual production, large size in fruit and an attractive typical striped color type. This parent tree produced a full crop of nearly 12 bushels when only 9 years old and a total of 141 bushels by the end of the sixteenth season. The fact that this tree produced 12 bushels when only 9 years old, shows that it must have come into bearing at not more than 6 years after planting. The fruit is large and extremely attractive. Color, bright red with indistinct stripings. Flesh, very juicy, crisp and tender and most excellent for either dessert or culinary uses. Season, November to March.

## New HARALSON

This new variety stands in a class by itself on account of its hardiness. It is the coming Apple for the cold Northwest. Comes into bearing very early in life, and is a vigorous grower. Fruit is good size, red and long keeping. Very good eating Apple. If you are looking for an Apple that will bear where it gets 40 degrees below zero, order Haralson.

Dolgo Crab Apple

Haralson

## Dolgo Crab Apple

The perfect Crab. Hardy everywhere. Heavy bearer, usually beginning the year after setting. Jells perfectly even when dead ripe. A fine ornamental tree for the lawn as well as a wonderful commercial sort. Rapidly displacing such varieties as Transcendent and Hyslop. 75c each; 3 for \$2.10.

## Stromer's GREAT SEED VALUE for 1937

### CHINESE ELM Shade Tree

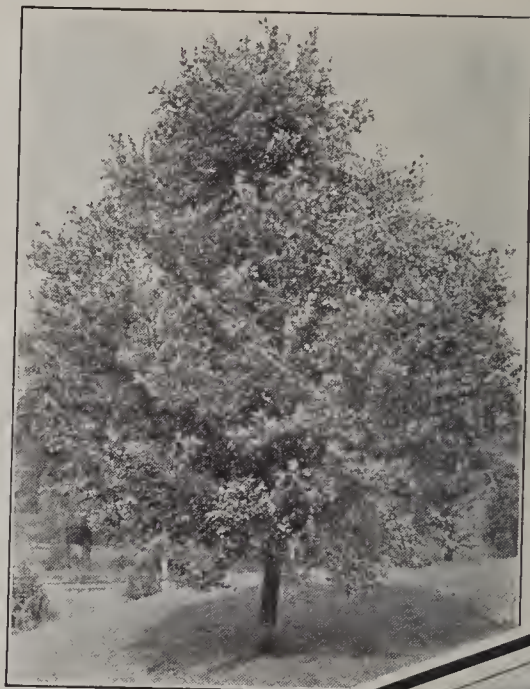

One of the most rapid growing trees. Very durable and hardy. Slender, tough branches. Compact habit of growth with small attractive leaves. Highly recommended for street planting. Grows anywhere, and is one of the best for dry climates. 3-4 ft., 10c each; 5 for 40c; 10 for 70c. 4-5 ft., 15c each; 5 for 60c; 10 for \$1.00. 6-8 ft., \$1.00 each; 2 for \$1.80.

### CHINESE ELM Hedge

The very finest of all hardy hedges, stands 40 degrees below zero, does equally well on very low or very dry soil, can be trimmed or left natural for windbreak. 12 to 18 in., 10 for 45c; 50 for \$1.75; 100 for \$3.00.

Chinese Elm Hedge

Chinese Elm Tree

WEeping MAPLE. Rapid growing, producing quick shade for street and park. Leaves are inverted, bright green above and silver beneath. 5-6 ft., 55c each; 2 for \$1.00.

MOUNTAIN ASH, EUROPEAN. A fine shade and ornamental tree. Covered from July till midwinter with large clusters of bright red berries. 4-5 ft., \$1.25 each.

CUT-LEAF WEEPING BIRCH. A graceful white-barked tree with drooping limbs, and cut-leaf foliage. For lawn and park. 4-5 ft., \$1.50; 2 for \$2.75.

LOMBARDY POPLAR. A tall, columnar tree that grows quickly. Makes a fine effect along driveways. 5-6 ft. trees, each, 30c; 2 for 55c; 5 for \$1.25; 10 for \$2.00.

NIOBE WEEPING WILLOW. A large tree with long, drooping branches. Very hardy. Fine for parks and near rock gardens or along streams. 4-5 ft., 60c each; 2 for \$1.00.

CATALPA. Umbrella GEI. 5-7 ft. head. 2-yr. heads, \$1.00 each; 2 for \$1.95.

### AMERICAN BITTER-SWEET

Hardy vine producing bunches of red berries retaining their color a long time and very popular for cutting and hanging in the home for winter bouquets. 2-yr. plants, field-grown, 40c each; 3 for \$1.00.

## HARDY HEDGES

100 ft. of Hardy Hedge for \$5.25; 12-18 in. Tall.

AMOR RIVER NORTH PRIVET. This is the hardiest of all hedges, and one of the most beautiful. Foliage dark glossy green. Leaves stay on long into the winter. Fine white flowers with berries later on. Set 1 foot apart. 10 for 75c; 50 for \$3.00; 100 for \$5.25; 250 for \$10.00; 500 for \$19.00.

BARBERRY, THUNBERG'S GREEN. Perfectly hardy. Rust-proof. Bright green foliage turning to a dazzling red in autumn, followed by red berries. Very beautiful. Grows in all soils. May be pruned, or makes a beautiful hedge not trimmed. Also fine for specimen bushes or borders. Strong, 2-yr., 12c each; 10 for \$1.00; 100 for \$5.95; 250 for \$11.00; 500 for \$21.00.

RED BARBERRY. Makes a beautiful specimen bush as well as hedge plant. Foliage purple to a bright red. Produces a brilliant appearance in any landscape. 15-18 in., 2 yr., each, 20c; 6 for \$1.00.

### WISTERIA

A tall, vigorous climber. Lilac-purple blooms in June and July. Fine for pillars, arbors or trellises. Two-year plants, 45c each; 3 for \$1.25.

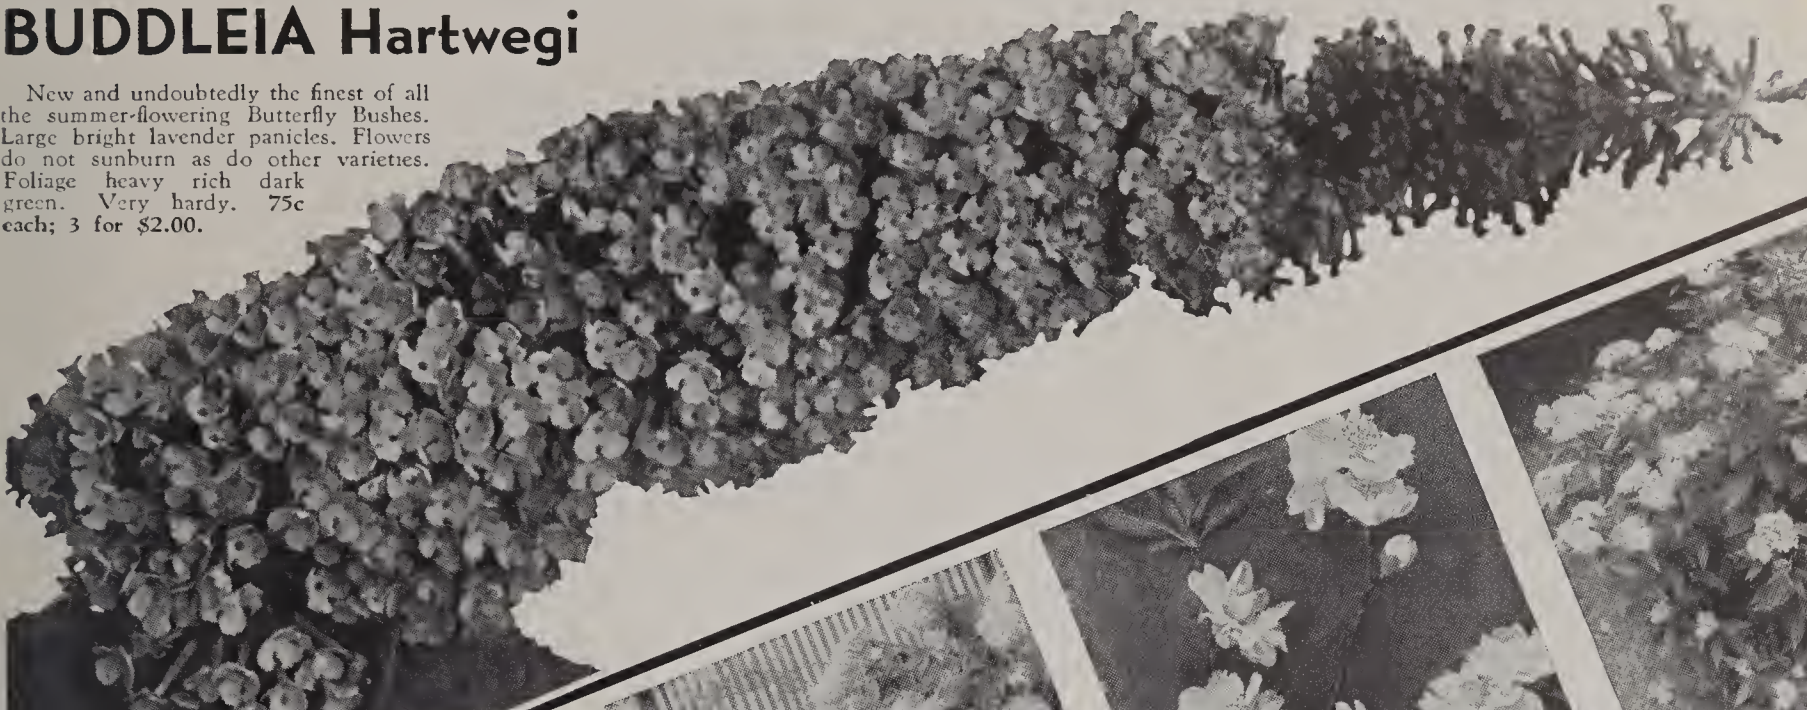

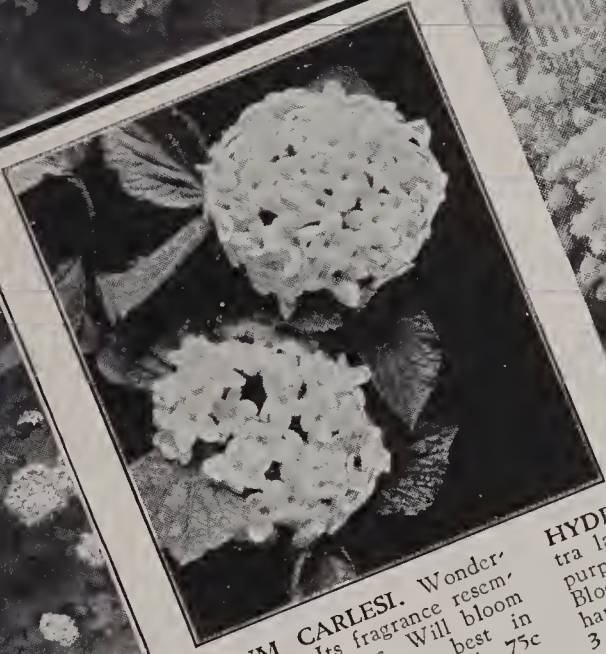

# BUDDLEIA Hartwegi

New and undoubtedly the finest of all the summer-flowering Butterfly Bushes. Large bright lavender panicles. Flowers do not sunburn as do other varieties. Foliage heavy rich dark green. Very hardy. 75c each; 3 for \$2.00.

**HYDRANGAEA A. G.** (Hills of Snow). Resembles the old-fashioned Snowball bush. Large blooms that open in June and last all summer. 1-1½ ft. plants, 20c each; 3 for 55c; 10 for \$1.50.

**VIBURNUM CARLESII.** Wonderful new shrub. Its fragrance resembles Trailing Arbutus. Will bloom early in spring, thrives best in partial shade, cool moist soil. 75c each; 3 for \$2.00.

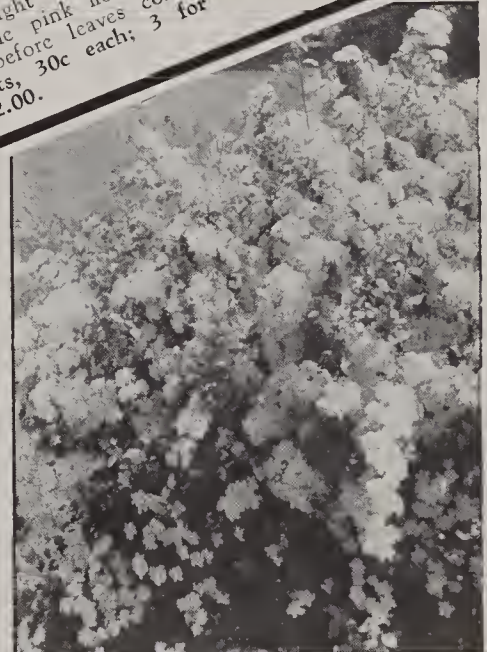

**HYDRANGAEA P. G.** Flowers extra large, white turning to pinkish purple. Makes fine winter bouquets. Blooms July to October. Very hardy. 1½ ft. plants, 20c each; 3 for 55c; 10 for \$1.50.

**FLOWERING ALMOND,** Pink. Small shrub, upright branches covered with double pink flowers in May. Blooms before leaves come. 1-1½ ft. plants, 30c each; 3 for 85c; 10 for \$2.00.

**SPIREA ANTHONY WATERER.** Crimson flowers in large, flat clusters. Blooms early and continues till fall. 12-15 in., 15c each; 3 for 40c; 10 for \$1.25.

## SPIREA VAN HOUTTEI

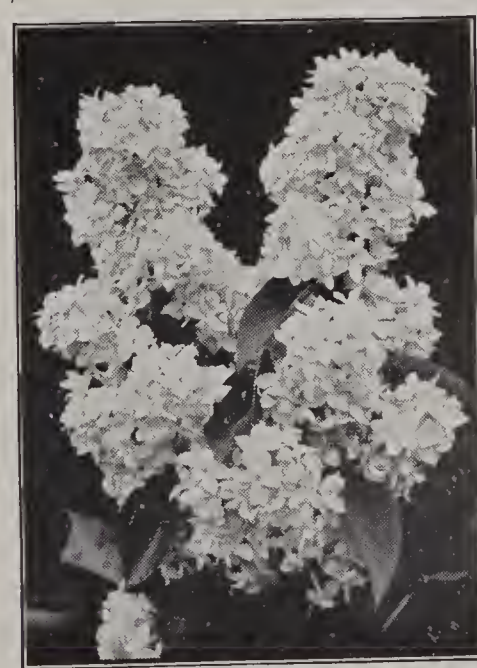

Sometimes called Bridal Wreath. Branches droop to the ground with small white flowers early in the spring. Foliage makes it beautiful all summer. 1-1½ ft. plants, 2-yr., 10c each;

3 for 27c  
10 for 85c  
100 for \$6.00

**10c**  
Each

## PERSIAN LILAC

A decided improvement over the common Lilac. Does not sprout so much from the roots. Height 5 to 10 feet. Flowers bright purple. Blooms in May and June. 1-1½ ft. plants, 25c each; 3 for 70c; 10 for \$1.98.

Persian Lilac

## BEAUTY BUSH (Kolkwitzia)

A new Chinese shrub. Soft green leaves tinted with bronze. Clear pink, bell-shaped flowers, with brown markings. Very hardy. 1-1½ ft. plants, 35c each; 3 for \$1.00.

## Aladdin

### Everblooming Hardy Chrysanthemum

Commences to bloom even in small pots before it is safe to transplant outdoors; and after the roots have become established in their new home, the plant is never without a liberal show of bloom from June continuously into November. Flowers are quite full and compact, 2½ to 3 inches wide. The body color is bronze-gold, capriciously stained apricot, light red and damask rose. 30c each; 3 for 80c; \$3.00 per doz., postpaid.

Dwarf Border Asters

## Pink Cushion

### The Azalea-Flowered Chrysanthemum

The plant is dwarf and spreading in growth, very hardy and far more prolific than any other variety. It has been known to have over 1500 blooms open at one time. The color is very pleasing rose-pink. Pink Cushion produces its first flowers in late August and continues to be a mass of blazing glory until late frosts arrive. One of the finest outdoor varieties. Price: Only 30c each; 3 for 80c; 12 for \$3.00, postpaid.

Aladdin

## New Dwarf Hybrid BORDER ASTERS

In September, when flowers are scarce, these new Dwarf Border Asters will be just covered with bloom. They are wonderful for borders and rock gardens. They are so interesting and valuable, as they rarely are over 1 foot in height, and bloom way through the month of September. We offer you 7 varieties in a beautiful assortment of shades.

- COUNTESS OF DUDLEY. 9 inches. Charming flowers of clear pink. Yellow eye.
  - LADY HENRY MADDOCKS. 12 inches. Solid clear pale pink. Very compact.
  - MARJORIE. 12 inches. Larger flowers. Bright rose-pink.
  - NANCY. 12 inches. Very beautiful flesh-pink flowers. Late September.
  - RONALD. 12 inches. A brilliant lilac-pink flower with rose-pink buds.
  - SNOWSPRINT. 12 inches. Smothered with large semi-double white flowers.
  - VICTOR. 8 inches. This is the dwarfest. Light lavender-blue flowers.
- Each, 30c; 3 for 80c; 7 (1 of each), \$1.75; 2 of each, \$3.00, postpaid.

Pink Cushion

## New HYBRID KOREAN Chrysanthemums

This is a valuable new race of perennials introducing lovely pastel shades into October landscapes, with profuse single flowers. Height, 2 to 2½ feet.

- APOLLO. The most profuse bloomer, the flowers 2 inches across. A sparkling combination of bronze, red and gold, suffused salmon.
  - CERES. Old gold blended with chamois-yellow; dusted with coppery bronze.
  - DAPHNE. Flower 3½ inches across; a lovely daphne-pink with a sheen of lilac-rose, and prominent golden stamens.
  - DIANA. A charming blend of Chatenay-rose-pink blended with lilac-rose and soft salmon. Petals are triple rayed.
  - MARS. Deep amaranth-red with a velvety wine-red sheen. The latest.
  - MERCURY. Bronze-red changing to coppery bronze. 3-inch flowers; early, showy, long lasting as a cut flower.
- Each, 35c; 3 for \$1.00; 6 (1 each) for \$1.49, postpaid.

## Large Flowering Chrysanthemums

Gorgeous large blooms from early fall until freezing. Should have a place in every garden, making it bright and cheerful up to the first day of winter. Extremely hardy and easy to grow. Require very little care. This collection is made up of ten of the newest and best varieties of yellows, reds, whites, pinks, and bronze; every plant different.

Korean Chrysanthemums

## POMPON Chrysanthemums

Small dwarf button and medium types of Chrysanthemums. Fine for cutting and borders. Very hardy and easy to grow. Blooms from early fall until freezing weather. This collection is made up of ten of the newest and best varieties, including yellows, reds, whites, pinks, and bronze; all different.

"MICHIGAN'S OUTSTANDING NURSERY"

GEORGE STROMER

New Buffalo,

Michigan

Norway Spruce Windbreak

NORWAY SPRUCE

The ideal spruce for windbreaks, and for ornamental decorations. One of the best for Xmas trees. Big money in planting small Norway spruce now and growing them into Xmas trees in a few years. Very popular for single specimens or with evergreen groups. Pyramidal in habit. Lofty and beautiful. We have them priced to sell.

Colorado Blue Spruce

COLORADO BLUE SPRUCE

A very hardy and popular evergreen. One of the most beautiful for landscape work. Foliage is greenish blue to silvery blue. The blue color is the most beautiful early in the Spring when the new growth starts. Colorado blue should be set in the full open sunlight not too near other trees and buildings for best color. We have them priced to sell.

Mugho Pine

Austrian Pine

LILAC, Marechal Foch [Lemoine]

The expert horticulturist, Felix Crousse, pronounced this to be the handsomest of all single Lilacs. The high panicles, carried by long straight stems, are truly immense and very light. The individual flowers, fully 1 inch in diameter, perfectly shaped, are of a bright carmine-rose with a pink eye when opening, contrasting with the mauve of the older flowers and the deep carmine of the buds. Early. A TRULY SENSATIONAL NEW LILAC. Very scarce. 1½ to 2 ft., each \$1.95.

## **HARDEE TREE HAS BUMPER CROP AFTER 1934's LONG 18° BELOW ZERO**

### **Scientists Hail HARDEE as the Most Important Peach Discovery in Past 25 Years - - -**

Actual photograph of Har-dee fruit. The fruit is de-scribed by the Ohio State authorities as being "large to above large. The fruit is slightly elongated and char-acteristically pointed. It is an Elberta type, ripening with Elberta and a little later. It is yellow, freestone, highly colored and with firm flesh of the best quality." Its thick skin makes it an excellent shipper. The flavor of the fruit is distinct and delicious. It has a very real peach fla-vor. The tree habit and vigor of growing is good indeed and may be classed as inter-mediate between Elberta and J. H. Hale. This Peach is sold under license of the pat-ent holder.
